Elitech RC-5+ TE | PDF USB Reusable Temperature Data Logger | Internal Sensor | External Probe -22?~158?

With its plug-and-play USB port interface, the Elitech RC-5+ USB temperature data recorder enables quicker access to data gathered throughout any cold chain management procedure. Pharmaceutical, food, life science, freezer, fresh food cabinets, cooler boxes, and medical cabinets might all use this. The RC-5+ temperature data recorder has two sorts of alarms: a single alarm and a cumulative alarm. This is different from the standard USB temperature data logger. Any delicate storage and transportation system's dynamic demands are met by its sturdy and small design. It captures the temperature in real time and stores it in non-volatile memory that can be accessed using a USB port.

Specifications	Details
Temperature Range	-40°C~+85°C
Power Supply	CR 2032 Replaceable Battery
Protection	IP67
Memory Capacity	32000 Points
Resolution	0.1°C
